

Deccan Gymkhana - Model Colony

Pune Municipal Corporation electoral ward number 14

In order to properly plan, implement and monitor a city or any space we require a wide range of relevant, accurate and timely data. The Quantified Cities Movement has been created to help citizens to collect data for their neighborhoods to create transparency in the process of planning. The Quantified Cities Movement focuses on participation of adolescents along with adults for localized action for planning and urban resilience building.

The grids shown in the map cover the whole Pune City, and various types of data is collected for each of the grid squares.
